

ONE SYSTEM PROVIDES
FLEXIBILITY & COST SAVINGS

PROCESS BONE MARROW & WHOLE BLOOD

Magellan TruMARO™ Kits allow users to recover progenitor cells (MSCs & HSCs), platelets, white blood cells and growth factors. Platelet-poor plasma available with every spin.

Magellan TruPRP™ Kits allow users to recover platelet-rich plasma (PRP) containing white blood cells, platelets and growth factors, or platelet-poor plasma containing matrix proteins and platelets. Leukocyte-reduced PRP also available.

BOTH MARO AND PRP KITS ARE AVAILABLE FOR USE WITH THE MAGELLAN SYSTEM

- Concentrates up to 14x Baseline
- BioAdaptive Processing™
- Customizable Concentration
- Automation Ensures Quality
- Flexible & Cost-Effective
- Processes 30-180 mL Using a Single Kit

**Offer your patients a personalized biologic.
Use Magellan on your next case, 888.705.ISTO.**

Indications

The Magellan Autologous Platelet Separator System is designed to be used in the clinical laboratory or intraoperatively at the point of care for the safe and rapid preparation of platelet-poor plasma and platelet concentrate (platelet-rich plasma) from a small sample of a mixture of blood and bone marrow. The plasma and concentrated platelets produced can be used for diagnostic tests. Additionally, the platelet-rich plasma can be mixed with autograft and/or allograft bone prior to application to an orthopedic site (BK040068). The Magellan Ratio Dispenser Kit is intended for the application of fluids, as deemed necessary by the surgeon's determination of the clinical use requirements, to facilitate the preparation of soft tissue prior to repair (K041830).

Disclaimer

The platelet-rich plasma prepared by this device has not been evaluated for any clinical indications. Platelet-rich plasma prepared from a mixture of whole blood and bone marrow may contain higher levels of plasma-free hemoglobin than platelet-rich plasma prepared from whole blood.

**BUILT TO
CONCENTRATE**

Magellan® is an **autologous concentration system** that delivers concentrated platelets and cells at the point of care.

Most Elegant Machine on the Market

The Magellan® Platelet Separator is not your everyday centrifuge. Unlike the lab centrifuges that have been repurposed, the Magellan® was specifically designed to concentrate peripheral blood or a mixture of blood and bone marrow aspirated at bedside.

This fully automated system processes the blood without the need for manual manipulation. At the end of its cycle the PRP is delivered into a collection syringe and is ready for immediate application.

Key Features:

- Fully Contained - Automated System
- Self Balancing Disposable Canister Eliminates Counterweights
- Electronic Sensor Facilitates Separation Phases
- Lightweight - Space Saving Design

Elegant Design

DELIVER PERSONALIZED MEDICINE

Every patient has a unique biology with inherent variability, so you need a solution that is customized for each patient. Go beyond the standard of care and deliver a personalized biologic with the Magellan Autologous Concentration System.

CUSTOMIZED AUTOLOGOUS THERAPY

The fully-automated Magellan system uses proprietary BioAdaptive technology and customizable concentration factors to yield a tailored autologous solution for each patient.

Concentrates up to 14x Baseline^{1,2}

Provides high concentrations of platelets, growth factors and progenitor cells

BioAdaptive Processing™

Smart technology adjusts processing based on patient biology to optimize results

Customizable Concentration

Users determine potential concentration factor by selecting input and desired output volumes

Automation Ensures Quality

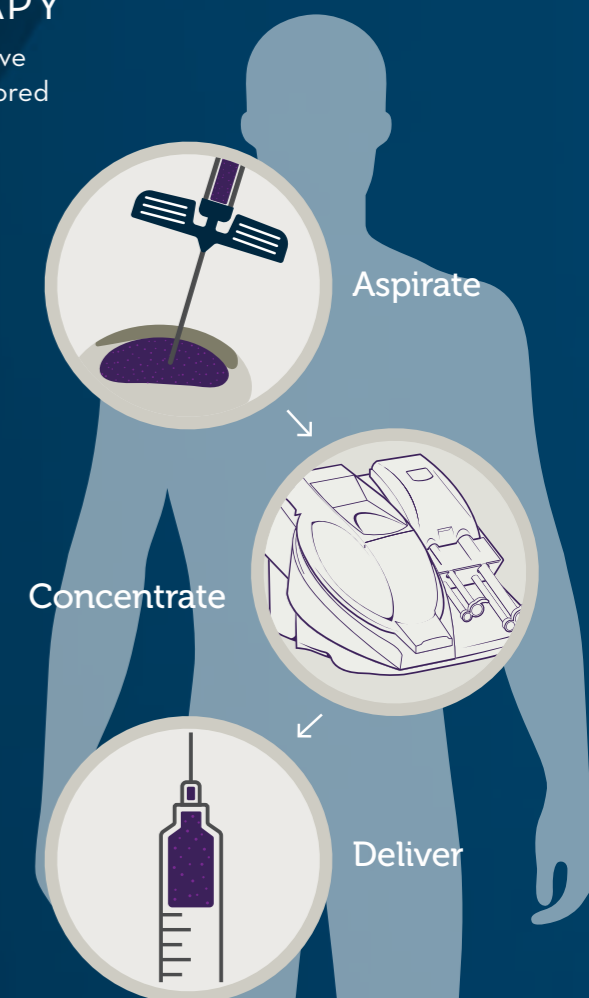

Fully-automated, closed system concentrates more consistently than manual systems

Flexible & Cost-Effective

Processes up to three cycles per patient using a single kit, with flexibility to process bone marrow and whole blood

TruMARO™ and TruPRP™ Kits

Everything you need to process in-office, with platelet-poor plasma and leukocyte-reduced platelet-rich plasma also available

CONCENTRATE AT THE PUSH OF A BUTTON

Magellan employs cutting-edge technology to produce a customized biologic quickly and easily.

SUPERIOR TECHNOLOGY. SUPERIOR PERFORMANCE.

Fully Automated

Simple one-button start for ease of use

Closed System

Minimal breaks in sterile barrier promote safety

BioAdaptive Processing

Works with optical sensors to tailor processing parameters based on each patient's hematocrit

Optical Sensors

Identify the cellular fraction to eliminate error and optimize results

Selectable Output

Allows users to define desired therapeutic volumes (3-10 mL per cycle)

Optical Sensors

Input Bone Marrow Aspirate (BMA) or Blood

Red Blood Cells (RBC) Separated

RBCs Extracted

Buffy Coat Is Concentrated

Nucleated Cells, Platelets & Growth Factors Ready for Immediate Use

CUSTOMIZE POTENTIAL CONCENTRATION FACTORS

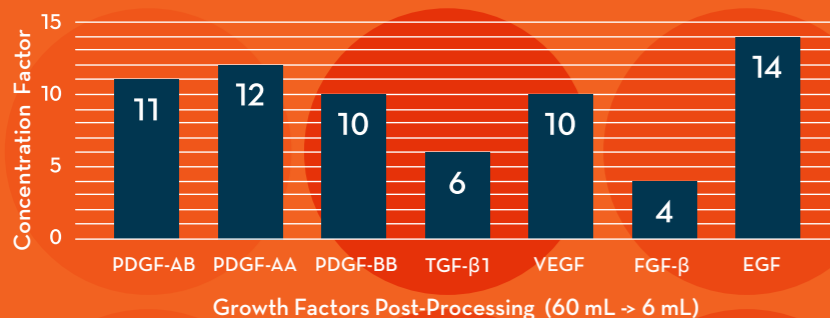

HIGH INPUT VOLUMES + LOW OUTPUT VOLUMES = HIGHEST CONCENTRATION¹

Users can process 30-60 mL per cycle (up to 180 mL per patient) and select final output volume between 3-10 mL per cycle (up to 30 mL per patient) to customize final concentration.

MAGELLAN CONCENTRATES REGENERATIVE POTENTIAL

AMPLIFY ESSENTIAL GROWTH FACTORS UP TO 14X BASELINE²

- PDGF**
Platelet-Derived Growth Factor
- TGF-β**
Transforming Growth Factor–Beta
- VEGF**
Vascular Endothelial Growth Factor
- FGF-β**
Fibroblast Growth Factor–Beta
- EGF**
Epithelial Growth Factor

Platelets release various growth factors that influence cellular processes, including proliferation and differentiation, angiogenesis, and tissue repair^{2,3}.

PROVEN TO CONCENTRATE VIABLE PROGENITOR CELLS

Data featuring Magellan TruMARO™ demonstrates increased concentrations of MSC & HSC and IL-1Ra when compared to BMA and whole blood^{4,5}.

- MSCs can differentiate into osteoblasts and chondrocytes⁶
- HSCs support blood vessel formation⁷
- IL-1Ra is reported to neutralize pain triggers^{5,8}

97% cell viability⁴

Processing yields viable cells

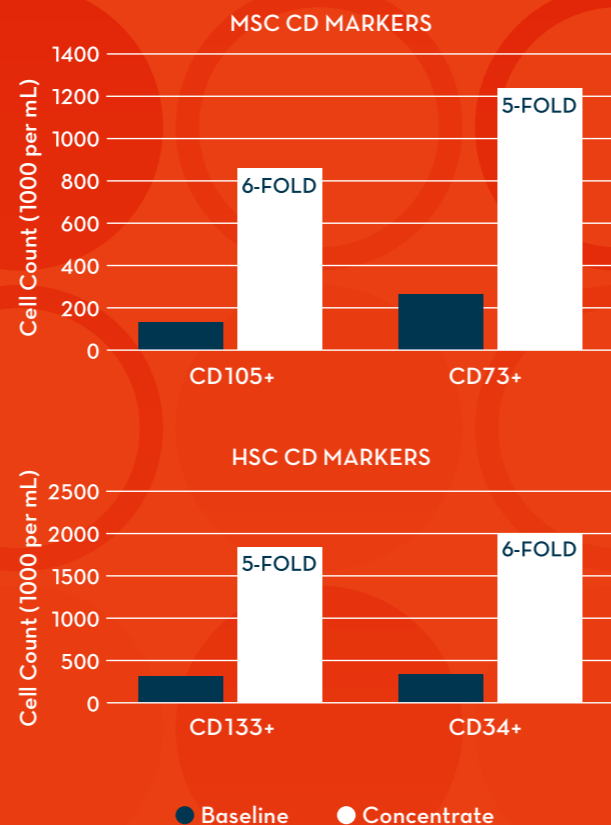

5–6x MSC & HSC concentration⁹

Confirmed by characterization of CD markers 73+, 105+, 34+ or 133+ via flow cytometry

94% reduction in Red Blood Cells (RBC)^{9,10}

BioAdaptive processing yields superior performance

CELL CHARACTERIZATION OF TruMARO⁹
